

Software Requirement Specification (SRS)

Employee Management System

1. Introduction

The Employee Management System is designed to maintain employee records digitally and reduce manual paperwork in organizations.

This section provides detailed information and explanation for project documentation purposes.

1.1 Purpose

The purpose of this project is to create a system that stores, manages, updates and retrieves employee information efficiently.

This section provides detailed information and explanation for project documentation purposes.

1.2 Scope

The system manages employee records including personal details, department information, salaries, and employee status.

This section provides detailed information and explanation for project documentation purposes.

1.3 Objectives

- Reduce manual work
- Improve data accuracy
- Provide quick access to records
- Maintain secure data

This section provides detailed information and explanation for project documentation purposes.

2. Overall Description

The system acts as a centralized database where administrators can manage employee information.

This section provides detailed information and explanation for project documentation purposes.

2.1 Product Perspective

The project replaces traditional paper-based methods.

This section provides detailed information and explanation for project documentation purposes.

2.2 Product Features

- Add employee
- View employee
- Update employee
- Delete employee
- Search employee

This section provides detailed information and explanation for project documentation purposes.

3. Functional Requirements

This section provides detailed information and explanation for project documentation purposes.

3.1 Add Employee

Users can enter employee details such as ID, Name, Department, Age, Salary, and Phone Number.

This section provides detailed information and explanation for project documentation purposes.

3.2 View Employee

Users can display all employee records.

This section provides detailed information and explanation for project documentation purposes.

3.3 Search Employee

Users can search employee information using ID or Name.

This section provides detailed information and explanation for project documentation purposes.

3.4 Update Employee

Users can edit employee records.

This section provides detailed information and explanation for project documentation purposes.

3.5 Delete Employee

Users can remove employee records.

This section provides detailed information and explanation for project documentation purposes.

4. Non Functional Requirements

- Reliability
- Security
- User friendly interface
- Fast response

This section provides detailed information and explanation for project documentation purposes.

5. Hardware Requirements

Processor: Intel i3 or above

RAM: 4GB minimum

Storage: 500GB

This section provides detailed information and explanation for project documentation purposes.

6. Software Requirements

Operating System: Windows 10/11

Programming Language: Python

IDE: VS Code/PyCharm

This section provides detailed information and explanation for project documentation purposes.

7. System Modules

Employee module, Database module, Search module, Update module, Delete module

This section provides detailed information and explanation for project documentation purposes.

8. Advantages

- Easy maintenance
- Saves time
- Reduces paperwork
- Better management

This section provides detailed information and explanation for project documentation purposes.

9. Future Enhancements

Attendance tracking, payroll management, report generation and login authentication can be added.

This section provides detailed information and explanation for project documentation purposes.

10. Conclusion

Employee Management System simplifies management of employee information and increases efficiency.

This section provides detailed information and explanation for project documentation purposes.

Appendix 1

The Employee Management System can be implemented using Python concepts such as variables, lists, functions, file handling, and conditional statements. It supports easy record management and improves organizational efficiency.

Appendix 2

The Employee Management System can be implemented using Python concepts such as variables, lists, functions, file handling, and conditional statements. It supports easy record management and improves organizational efficiency.

Appendix 3

The Employee Management System can be implemented using Python concepts such as variables, lists, functions, file handling, and conditional statements. It supports easy record management and improves organizational efficiency.

Appendix 4

The Employee Management System can be implemented using Python concepts such as variables, lists, functions, file handling, and conditional statements. It supports easy record management and improves organizational efficiency.

Appendix 5

The Employee Management System can be implemented using Python concepts such as variables, lists, functions, file handling, and conditional statements. It supports easy record management and improves organizational efficiency.
